

# YODA CONDITIONS

When a programmer **writes the conditions for a piece of code in the opposite order.**

Ruler example in Yoda terms: the sky is blue ('blue' === sky) When it should read: the sky is blue (sky === 'blue')

---

# SPAGHETTI CODE

a program's **source code that is hard to read.** It often happens that a colleague's programmer has written code as **clear as mud.**

---

# CamelCase

**Each word inside the phrase is written with a capital letter.**

The capital letters inside the word *resemble the humps of a camel.*

---

# snake\_case

Snake Case, **each space is replaced with an underscore.**

---

# Kebab-case

Kebab or Dash Case **spaces are replaced by a dash**

---

# HYDRA

A bug that, when an attempt to fix is made, introduces two new bugs. **A bug that cannot be fixed.**

---

# LOCH NESS MONSTER BUG

A bug that has only been **spotted by one person.**

---

# JIMMY

A generalized name for **a clueless or new developer.**

---

# SCRIPT KIDDIE

a derogative term that computer hackers coined to refer to **immature, but often just as dangerous, exploiters of internet security weaknesses.**

---

# UNICORN

A unicorn software developer is **someone who knows web development and design skills**. Employers love a good unicorn developer so it's always a good idea for a web designer to learn coding skills (and vice-versa)!

---

# WYSIWYG

“What You See is What You Get.”

**A visual content editor within CMS that allows you to modify content in your website without needing to know HTML.**

*If you've ever **made text in your website bold just by highlighting and clicking “Bold,”** you were using WYSIWYG.*
